## Notes:

<sup>1</sup> The total concentration is the sum of detected diesel- and oil-range hydrocarbon concentrations.

U = The analyte was not detected at a concentration greater than the identified reporting limit.

NE = Not Established

**Bold** indicates analyte was detected

## Notes:

<sup>1</sup> Idaho Risk Evaluation Manual, July 2004.

<sup>2</sup> Methylene chloride was detected in the trip blank associated with this sample indicating that the detection of methylene chloride in this sample is the result of lab contamination.

Shading indicates the detected concentration is greater than screening level.

**Bold** indicates analyte was detected

U = The analyte was not detected at a concentration greater than the identified reporting limit.

NE = Not Established

**Notes:**<sup>1</sup> Idaho Risk Evaluation Manual, July 2004.<sup>2</sup> The laboratory result is for total benzofluoranthenes. The screening levels for benzofluoranthenes are based on the individual isomers (i.e., benzo (b) fluoranthenes and benzo (k) fluoranthenes). The concentrations of total benzofluoranthenes were less than the screening level of either isomer (i.e., benzo (b) fluoranthenes at 422 mg/kg and benzo (k) fluoranthenes at 4,220 mg/kg).

U = The analyte was not detected at a concentration greater than the identified reporting limit.

NE = Not Established

**Bold** indicates analyte was detected

**Notes:**

<sup>1</sup> Idaho Risk Evaluation Manual, July 2004.

<sup>2</sup> The screening levels for the identified metal includes the background concentration included in the Engineering Evaluation/Cost Analysis for the site (E&E 2001). The detected concentrations did not exceed the background concentration and therefore, were not highlighted as exceeding the screening level.

U = The analyte was not detected at a concentration greater than the identified reporting limit.

NE = Not established

**Bold** indicates analyte was detected
